

1. What kind of search are you expecting — keyword-based, category-based, or both?
2. Should the search show results instantly as users type (dynamic search)?
3. Will the search include brand, color, size, and price filters?
4. Should the search support misspelled words or similar keyword suggestions (for example, “Nik” → “Nike”)?
5. What data fields will be included in search results (name, price, image, availability)?
6. Should search results show both available and out-of-stock items?
7. How should the system handle no-result situations (e.g., show “No products found” or suggestions)?
8. Will there be a search history or recent searches option for users?
9. Should the search bar be available on all pages (Home, Product page, Cart, etc.)?
10. Are there any performance expectations — like maximum response time for displaying search results?
